

BONNET LOCATION.

DOOR MIRROR

CONGRATULATIONS ON YOUR PURCHASE OF A SET OF ROO ALERTS.

Do not expect to see animals running away from your vehicle, as THE ROOALERT does not scare them! The ultrasonic whistle is too highly pitched for the human ear to register, it is INAUDIBLE to humans. Kangaroo's stop movement in the bush and fields to endeavour to locate the ultrasonic noise, nature does the rest, if they are on the roadway, will hop a few meters from the road, SIT and watch the vehicle pass.

Birds will fly away from the vehicle if on the roadway , flocks of Galah's will wheel to the rear of the vehicle not to the front as they do when ROOALERT BY "HOBI" is not fitted.

NO ANIMAL INSIDE OR ON THE VEHICLE WILL BE AFFECTED BY THE "HOBI".

DO NOT TAIL GATE THE VEHICLE IN FRONT AS IT WILL ABSORB THE ULTRASONIC SOUND AND THE WINDSCREEN WILL BE COVERED WITH INSECT MESS.

"HOBI" HAS BEEN TESTED AT 90% EFFECTIVE.

FITTING INSTRUCTIONS

ROOALERT BY "HOBI" SHOULD BE FITTED ON THE BONNET OF THE VEHICLE, TO OBTAIN THE MAXIMUM WIND FLOW THROUGH THEM AS IT IS THE WIND WHICH PRODUCES THE WHISTLE.

MOUNT TOUCHING THE OUTSIDE EDGE OF THE WINDSCREEN WASHER OUTLETS ON BOTH SIDES OF THE VEHICLE. WITH THE HOLE TO THE FRONT, BULLET END TO SCREEN

In the case of hidden washer outlets. Approx 350 mm in front of screen and about 740 mm apart.(centred)

DO NOT MOUNT ON BUMPER, INTO GRILL, INTO ROOBARS. THIS WILL STOP THEM WORKING.

A SET MUST BE USED AS IT IS THE STERIO EFFECT WHICH DEFLECT BUGS AND BIRDS. VEHICLES WHICH HAVE REMOVED "HOBI" 25 YEARS LATER HAVE FOUND NO TRACE WHAT SO EVER LEFT, ON THE PAINT WORK.

They must be kept clean of mud and dust, jet water through each time you wash the car, in drought conditions use an air hose or remove the front With CARE and clean.
